Passive MPS 1

As at 31 May 2026

Investment objective

AJ Bell Passive MPS 1 aims to make a positive return when measured over a period of at least five years, this may be less than the level of inflation (as measured by the consumer price index). Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as index funds and ETFs. These products hold different types of securities such as cash and bonds and company shares. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Risk profile

For investors who can tolerate some shorter-term capital loss from their portfolio, as markets fluctuate. The portfolio invests in funds and exchange traded funds (ETFs), using a defined strategic asset allocation process to deliver returns while meeting the targeted level of risk.

Risk rating providers

Market volatility

Each portfolio has an expected level of risk, measured by volatility. This is a statistical measurement of how widely the returns of each portfolio is likely to vary from its average over time. This is measured on a forward looking basis and is used to help you understand the level of risk taken in each portfolio.

Expected volatility	4.20% - 6.30%

Passive MPS 1

As at 31 May 2026

Indicative Total Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For this MPS, this is around £25,000.

Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA Mixed Investment 0-35% Shares is included for reference. The portfolio does not aim to track the IA sector as a benchmark. Performance is calculated on a net of fees basis.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 18 August 2016. Cash performance is measured using the AJ Bell Investcentre platform interest rates.

Allocation and performance information contained in this document is representative of the standard Passive MPS 1 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation, performance and cost.

Based on target weights at portfolio rebalance. Totals may not sum to 100% due to rounding.

The AJ Bell Managed portfolio Service (MPS) have been risk mapped by independent risk profiling services. View our Risk Profiling Tools document on www.investcentre.co.uk/support/infocentre for further information. The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represent investment advice or a recommendation to buy or sell units/ shares in a fund or portfolio.

! Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Passive MPS 5

As at 31 May 2026

Investment objective

AJ Bell Passive MPS 5 aims to make an average return above the level of inflation (as measured by the consumer price index) over a period of at least five years. In favourable market conditions returns may be higher. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as index funds and ETFs. These products hold different types of securities such as cash and bonds and company shares. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Passive MPS 5

As at 31 May 2026

Indicative Total Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For this MPS, this is around £25,000.

Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA Flexible Investment is included for reference. The portfolio does not aim to track the IA sector as a benchmark. Performance is calculated on a net of fees basis.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 18 August 2016. Cash performance is measured using the AJ Bell Investcentre platform interest rates.

Allocation and performance information contained in this document is representative of the standard Passive MPS 5 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation, performance and cost.

Based on target weights at portfolio rebalance. Totals may not sum to 100% due to rounding.

The AJ Bell Managed portfolio Service (MPS) have been risk mapped by independent risk profiling services. View our Risk Profiling Tools document on www.investcentre.co.uk/support/infocentre for further information. The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represent investment advice or a recommendation to buy or sell units/ shares in a fund or portfolio.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Passive Income MPS 1

As at 31 May 2026

Investment objective

AJ Bell Passive MPS Income 1 aims to minimise the risk of losing value, whilst delivering a sustainable income when measured over a period of at least five years. Over shorter periods the portfolio may lose value, including sharp falls in certain market conditions, as it invests in securities that can go both up and down in price.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as index funds and ETFs. These products hold different types of securities such as cash and bonds and company shares. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. To deliver income the portfolio invests in a wide range of income focused index strategies. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Model Launch Date	19 Feb 2018
Underlying OCF	0.19%
Annual Investment Management Charge	0.15%
Indicative Total OCF	0.34%
Transaction Costs	0.05%
Target income	3.00%-5.00%

Based on the current composition of the portfolio and the most recent dividend and income payments made by these holdings we can estimate the target income yield the portfolio will generate over a trailing 3-year period. It is important to note that historic income and dividend payments are not always a reliable indicator of future income payments, especially in periods of market stress.

Performance

PIMPS2/Passive Income MPS 2/20260531/318950

Active MPS 1

As at 31 May 2026

Investment objective

AJ Bell Active MPS 1 aims to make a positive return when measured over a period of at least five years, this may be less than the level of inflation (as measured by the consumer price index). Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products mainly hold typically lower risk assets such as cash and bonds, with smaller holdings in company shares. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. The portfolio invests in a wide range of strategies that may include both actively managed and passive strategies to gain exposure to a variety of asset classes across a diversified range of global markets. The portfolio looks to gain exposure to high quality active managers who have the potential to outperform markets over time, but it will only use these where there is conviction that this still makes financial sense after fees have been deducted. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Active MPS 1

As at 31 May 2026

Indicative Total Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For this MPS, this is around £20,000.

Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA Mixed Investment 0-35% Shares is included for reference. The portfolio does not aim to track the IA sector as a benchmark. Performance is calculated on a net of fees basis.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 19 February 2018. Cash performance is measured using the AJ Bell Investcentre platform interest rates.

Allocation and performance information contained in this document is representative of the standard Active MPS 1 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation, performance and cost.

Based on target weights at portfolio rebalance. Totals may not sum to 100% due to rounding.

The AJ Bell Managed portfolio Service (MPS) have been risk mapped by independent risk profiling services. View our Risk Profiling Tools document on www.investcentre.co.uk/support/infocentre for further information. The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represent investment advice or a recommendation to buy or sell units/ shares in a fund or portfolio.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Active MPS 5

As at 31 May 2026

Investment objective

AJ Bell Active MPS 5 aims to make an average return above the level of inflation (as measured by the consumer price index) over a period of at least five years. In favourable market conditions returns may be higher. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products hold different types of securities such as cash and bonds and company shares. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. The portfolio invests in a wide range of strategies that may include both actively managed and passive strategies to gain exposure to a variety of asset classes across a diversified range of global markets. The portfolio looks to gain exposure to high quality active managers who have the potential to outperform markets over time, but it will only use these where there is conviction that this still makes financial sense after fees have been deducted. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Active MPS 5

As at 31 May 2026

Indicative Total Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For this MPS, this is around £20,000.

Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA Flexible Investment is included for reference. The portfolio does not aim to track the IA sector as a benchmark. Performance is calculated on a net of fees basis.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 19 February 2018. Cash performance is measured using the AJ Bell Investcentre platform interest rates.

Allocation and performance information contained in this document is representative of the standard Active MPS 5 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation, performance and cost.

Based on target weights at portfolio rebalance. Totals may not sum to 100% due to rounding.

Active Income MPS 1

As at 31 May 2026

Investment objective

AJ Bell Active MPS Income 1 aims to minimise the risk of losing value, whilst delivering a sustainable income when measured over a period of at least five years. Over shorter periods the portfolio may lose value, including sharp falls in certain market conditions, as it invests in securities that can go both up and down in price.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products hold different types of securities such as cash and bonds and company shares. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. To deliver income the portfolio invests in a wide range of strategies that may include both actively managed and passive strategies. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Model Launch Date	19 Feb 2018
Underlying OCF	0.47%
Annual Investment Management Charge	0.15%
Indicative Total OCF	0.62%
Transaction Costs	0.12%
Target income	3.00%-5.00%

Based on the current composition of the portfolio and the most recent dividend and income payments made by these holdings we can estimate the target income yield the portfolio will generate over a trailing 3-year period. It is important to note that historic income and dividend payments are not always a reliable indicator of future income payments, especially in periods of market stress.

Pactive MPS 1

As at 31 May 2026

Investment objective

AJ Bell Pactive MPS 1 aims to make a positive return when measured over a period of at least five years, this may be less than the level of inflation (as measured by the consumer price index). Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products mainly hold typically lower risk assets such as cash and bonds, with smaller holdings in company shares. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. The portfolio invests in a wide range of strategies that may include both actively managed and passive strategies to gain exposure to a variety of asset classes across a diversified range of global markets. The portfolio looks to gain exposure to high quality active managers who have the potential to outperform markets over time, but it will only use these where there is conviction that this still makes financial sense after fees have been deducted. Our focus on longterm investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Pactive MPS 1

As at 31 May 2026

Indicative Total Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For this MPS, this is around £35,000.

Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA Mixed Investment 0-35% Shares is included for reference. The portfolio does not aim to track the IA sector as a benchmark. Performance is calculated on a net of fees basis.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 18 February 2019. Cash performance is measured using the AJ Bell Investcentre platform interest rates.

Allocation and performance information contained in this document is representative of the standard Pactive MPS 1 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation, performance and cost.

Asset allocation is based on the target active holdings combined with the underlying holdings of the CG AJ Bell Cautious Fund. Totals may not sum to 100% due to rounding

The AJ Bell Managed portfolio Service (MPS) have been risk mapped by independent risk profiling services. View our Risk Profiling Tools document on www.investcentre.co.uk/support/infocentre for further information. The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represent investment advice or a recommendation to buy or sell units/ shares in a fund or portfolio.

! Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Pactive MPS 5

As at 31 May 2026

Investment objective

AJ Bell Pactive MPS 5 aims to make an average return above the level of inflation (as measured by the consumer price index) over a period of at least five years. In favourable market conditions returns may be higher. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets.

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing mainly in collective investments, such as funds and ETFs. These products hold different types of securities such as cash and bonds and company shares. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. The portfolio invests in a wide range of strategies that may include both actively managed and passive strategies to gain exposure to a variety of asset classes across a diversified range of global markets. The portfolio looks to gain exposure to high quality active managers who have the potential to outperform markets over time, but it will only use these where there is conviction that this still makes financial sense after fees have been deducted. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Pactive MPS 5

As at 31 May 2026

Indicative Total Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For this MPS, this is around £35,000.

Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA Flexible Investment is included for reference. The portfolio does not aim to track the IA sector as a benchmark. Performance is calculated on a net of fees basis.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 18 February 2019. Cash performance is measured using the AJ Bell Investcentre platform interest rates.

Allocation and performance information contained in this document is representative of the standard Pactive MPS 5 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation, performance and cost.

Asset allocation is based on the target active holdings combined with the underlying holdings of the CG AJ Bell Adventurous Fund. Totals may not sum to 100% due to rounding

The AJ Bell Managed portfolio Service (MPS) have been risk mapped by independent risk profiling services. Responsible MPS 1

As at 31 May 2026

Investment objective

AJ Bell Responsible MPS 1 aims to make a positive return when measured over a period of at least five years, this may be less than the level of inflation (as measured by the consumer price index). Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price. The portfolio aims to have minimal exposure to companies generating sales from areas such as tobacco and alcohol, and higher exposure to companies with stronger environmental, governance or social practices (known as ESG).

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing in collective investments, such as funds and ETFs. These products mainly hold typically lower risk assets such as cash and bonds, with smaller holdings in company shares. Where possible we choose products that screen out companies generating substantial revenue from certain business involvements that may be deemed by some as controversial or immoral. These include but are not limited to gambling, certain fossil fuels and genetically modified organisms or companies that are deemed to be in breach of the UN Global Compact. In addition, we look for products that overweight companies with stronger environmental, social or governance practices compared to other companies in the same sector, as determined by ESG rating companies such as MSCI. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. Alongside investments in low-cost instruments, such as ETFs and Index funds, the portfolio has a substantial holding in the CG AJ Bell Responsible Screened Growth fund. This is done for portfolio efficiency. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

RESPMPS1/Responsible MPS 1/20260531/318957

Responsible MPS 2

As at 31 May 2026

Investment objective

AJ Bell Responsible MPS 2 aims to make an average return in line with inflation (as measured by the consumer price index) over a period of at least five years. Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price. The portfolio aims to have minimal exposure to companies generating sales from areas such as tobacco and alcohol, and higher exposure to companies with stronger environmental, governance or social practices (known as ESG).

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing in collective investments, such as funds and ETFs. These products hold a combination of cash, bonds and company shares, with a bias towards cash and bonds. Where possible we choose products that screen out companies generating substantial revenue from certain business involvements that may be deemed by some as controversial or immoral. These include but are not limited to gambling, certain fossil fuels and genetically modified organisms or companies that are deemed to be in breach of the UN Global Compact. In addition, we look for products that overweight companies with stronger environmental, social or governance practices compared to other companies in the same sector, as determined by ESG rating companies such as MSCI. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. Alongside investments in low-cost instruments, such as ETFs and Index funds, the portfolio has a substantial holding in the CG AJ Bell Responsible Screened Growth fund. This is done for portfolio efficiency. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Responsible MPS 2

As at 31 May 2026

Indicative Total Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For this MPS, this is around £40,000.

Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA Mixed Investment 20-60% Shares is included for reference. The portfolio does not aim to track the IA sector as a benchmark. Performance is calculated on a net of fees basis.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 1 March 2021. Cash performance is measured using the AJ Bell Investcentre platform interest rates.

Allocation and performance information contained in this document is representative of the standard Responsible MPS 2 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation, performance and cost.

Based on target weights at portfolio rebalance. Totals may not sum to 100% due to rounding.

The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represents investment advice or a recommendation.

Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Where practical the Responsible Screened Growth fund invests in products tracking MSCI Socially Responsible Investing (SRI) indexes for equity exposure. These indexes exclude companies with certain controversial business involvements and also utilise MSCI's Environmental Social Governance (ESG) ratings and ESG Controversy assessments. For further details please see MSCI's latest SRI Indexes Methodology document.

Responsible MPS 3

As at 31 May 2026

Investment objective

AJ Bell Responsible MPS 3 aims to make an average return at least in line with the level of inflation (as measured by the consumer price index) over a period of at least five years. Over shorter periods the portfolio may lose value, including sharp falls in certain market conditions, as it invests in securities that can go both up and down in price. The portfolio aims to have minimal exposure to companies generating sales from areas such as tobacco and alcohol, and higher exposure to companies with stronger environmental, governance or social practices (known as ESG).

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing in collective investments, such as funds and ETFs. These products hold a combination of cash, bonds, and company shares, with a bias towards company shares. Where possible we choose products that screen out companies generating substantial revenue from certain business involvements that may be deemed by some as controversial or immoral. These include but are not limited to gambling, certain fossil fuels and genetically modified organisms or companies that are deemed to be in breach of the UN Global Compact. In addition, we look for products that overweight companies with stronger environmental, social or governance practices compared to other companies in the same sector, as determined by ESG rating companies such as MSCI. The AJ Bell investments team uses in-house modelling to deliver a longterm approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. Alongside investments in low-cost instruments, such as ETFs and Index funds, the portfolio has a substantial holding in the CG AJ Bell Responsible Screened Growth fund. This is done for portfolio efficiency. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Responsible MPS 5

As at 31 May 2026

Investment objective

AJ Bell Responsible MPS 5 aims to make an average return above the level of inflation (as measured by the consumer price index) over a period of at least five years. In favourable market conditions returns may be higher. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets. The portfolio aims to have minimal exposure to companies generating sales from areas such as tobacco and alcohol, and higher exposure to companies with stronger environmental, governance or social practices (known as ESG).

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing in collective investments, such as funds and ETFs. These products mainly invest in company shares, with small holdings in bonds from both companies and emerging market governments. Where possible we choose products that screen out companies generating substantial revenue from certain business involvements that may be deemed by some as controversial or immoral. These include but are not limited to gambling, certain fossil fuels and genetically modified organisms or companies that are deemed to be in breach of the UN Global Compact. In addition, we look for products that overweight companies with stronger environmental, social or governance practices compared to other companies in the same sector, as determined by ESG rating companies such as MSCI. The AJ Bell investments team uses in-house modelling to deliver a long-term approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. Alongside investments in low-cost instruments, such as ETFs and Index funds, the portfolio has a substantial holding in the CG AJ Bell Responsible Screened Growth fund. This is done for portfolio efficiency. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Investment objective

AJ Bell Responsible MPS 6 aims to make an average return substantially ahead of inflation (as measured by the consumer price index) over a period of at least five years. Over shorter periods the portfolio may suffer significant losses in capital value, as it invests in securities that can go both up and down in price, with large weights in emerging markets and high growth companies. The portfolio aims to have minimal exposure to companies generating sales from areas such as tobacco and alcohol, and higher exposure to companies with stronger environmental, governance or social practices (known as ESG).

Investment approach

By spreading out the investments across regions, sectors and different types of assets, the portfolio aims to achieve its return objective whilst minimising price variation where possible. It does so by investing in collective investments, such as funds and ETFs. These products mainly invest in company shares, with small holdings in higher risk bonds. Where possible we choose products that screen out companies generating substantial revenue from certain business involvements that may be deemed by some as controversial or immoral. These include but are not limited to gambling, certain fossil fuels and genetically modified organisms or companies that are deemed to be in breach of the UN Global Compact. In addition, we look for products that overweight companies with stronger environmental, social or governance practices compared to other companies in the same sector, as determined by ESG rating companies such as MSCI. The AJ Bell investments team uses in-house modelling to deliver a longterm approach that combines different assets. This aims to efficiently deliver returns without compromising investors' tolerance for risk. Alongside investments in low-cost instruments, such as ETFs and Index funds, the portfolio has a substantial holding in the CG AJ Bell Responsible Screened Growth fund. This is done for portfolio efficiency. Our focus on long-term investing helps minimise transaction costs, ensuring that there is minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Risk profile

For investors who favour a higher allocation to equities and understand the risk reward relationship that entails over the short, medium, and long term. The fund predominantly invests in funds and exchange traded funds (ETFs), using a defined strategic asset allocation process to deliver returns while meeting the targeted level of risk.

Risk rating providers

Market volatility

Each portfolio has an expected level of risk, measured by volatility. This is a statistical measurement of how widely the returns of each portfolio is likely to vary from its average over time. This is measured on a forward looking basis and is used to help you understand the level of risk taken in each portfolio.

Expected volatility	14.70% - 16.80%

Responsible MPS 6

As at 31 May 2026

Indicative Total Ongoing Charges Figure (OCF) is inclusive of the AJ Bell Investments Annual Management Charge (fee of 0.15%) and the ongoing charges of underlying investments. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For this MPS, this is around £40,000.

Due to its multi-asset nature, no financial instrument or index represents a fair benchmark for the portfolio. However, to give context and enable an objective assessment of the portfolio's performance, the IA Flexible Investment is included for reference. The portfolio does not aim to track the IA sector as a benchmark. Performance is calculated on a net of fees basis.

Performance reflects the headline model and includes the underlying costs of the holdings and the annual investment management charge. It does not include any transaction costs that would have been incurred through rebalancing or changing any underlying holdings. This model was launched on 1 March 2021. Cash performance is measured using the AJ Bell Investcentre platform interest rates.

Allocation and performance information contained in this document is representative of the standard Responsible MPS 6 model held on AJ Bell Investcentre. The implementation of this model may vary when held via other platforms, for example, where access to certain share classes is restricted. This may lead to differences in allocation, performance and cost.

Based on target weights at portfolio rebalance. Totals may not sum to 100% due to rounding.

The assigned risk profiles do not indicate a promise, forecast or illustration of future volatility or returns nor represents investment advice or a recommendation.

! Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Where practical the Responsible Screened Growth fund invests in products tracking MSCI Socially Responsible Investing (SRI) indexes for equity exposure. These indexes exclude companies with certain controversial business involvements and also utilise MSCI's Environmental Social Governance (ESG) ratings and ESG Controversy assessments. For further details please see MSCI's latest SRI Indexes Methodology document.

Money Market MPS

As at 31 May 2026

Investment objective

The AJ Bell Money Market MPS aims to hold investments which deliver a cash-like return to investors. The portfolio will have a preference towards cash-like assets such as cash, money market funds and ultra-short-dated bond funds, with no exposure to higher-risk assets such as shares.

Investment approach

Investments that deliver a 'cash-like' return profile will typically invest in a range of lower risk investments such as overnight deposits, short term government bonds and also short dated bonds issued by companies. There is a surprisingly wide range of differing strategies investing in this way and therefore the AJ Bell investments team look to blend differing strategies together to build a well-diversified portfolio. The portfolio is designed to ensure there is always a minimum of four underlying strategies to ensure the portfolio is always spread across a wide variety of underlying issuers. In addition to dedicated money market funds, the portfolio can invest up to 20% in ultrashort-dated bond funds or ETFs. Ultrashort-dated bond funds are defined as funds that have less than one year to maturity on average, and can help bring additional diversification to the portfolio without taking excessive additional risk. The portfolio has strict controls on the amount of duration that can be taken to ensure the portfolio delivers cashlike returns for investors. Our focus on long-term investing helps minimise transaction costs, ensuring there is a minimal impact on the portfolio, however the asset allocation and selection is constantly monitored, and underlying holdings will be changed when appropriate.

Money Market MPS

As at 31 May 2026

Indicative Total Ongoing Charges Figure (OCF) reflects the ongoing charges of underlying investments. AJ Bell Investments do not charge an Annual Management Charge for this product. MPS transaction costs reflect the aggregated transaction costs reported by underlying products. In some instances products may deploy pricing mechanisms which can result in negative costs. Additional costs will be incurred while using the MPS. These include (where applicable) platform costs and dealing costs. Any charges payable to your financial adviser will apply in addition. Therefore, the actual performance of your portfolio might differ from the stated past performance. There is no set minimum investment into the MPS, however, the structure of the underlying investments means that the portfolios work more efficiently for investments above a certain size. For this MPS, this is around £10,000.

This model launched on 22 November 2023. The recommended holding period for this portfolio is a minimum of three months.

Based on target weights at portfolio rebalance. Totals may not sum to 100% due to rounding.

! Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

AJ Bell Gilt MPS Final Maturity 2026

As at 31 May 2026

Investment objective

The AJ Bell Gilt Portfolio Service aims to invest in direct gilts which deliver a return to investors predominately via capital gains. Income returns will be minimised where possible, however, they will constitute part of the overall investment return.

The portfolios will have exposure to direct nominal gilts that mature within the next year only, with no exposure to index-linked gilts, third-party products or to higher-risk assets such as shares.

The portfolios do not automatically rebalance, meaning cash can be extracted upon maturity of a gilt where appropriate.

Investment approach

The portfolio aims to deliver tax-efficient returns by investing directly in UK government bonds (gilts). It is structured to offer transparency, allowing investors to clearly understand the expected returns each year.

The investment strategy focuses on short-dated gilts with low coupon rates that are trading at a discount to par, with the objective of maximising tax-exempt capital gains upon maturity.

Gilts are selected using in-house research conducted by the AJ Bell Investments team, who continuously monitor the market to identify suitable opportunities that align with the portfolio's return objectives.

Benefits of Gilt MPS

- ✓ Tax efficient - gilts are free from capital gains tax, meaning you can keep more of your return when buying at a discount
- ✓ Stability & security - the UK government has never defaulted on a bond payment, meaning gilts held to maturity are a particularly low-risk way to achieve a stable return
- ✓ Low-cost - generate tax-efficient returns for market-leading management charge of 0.10%

Holding period	Best fixed rate cash account**
2 Years	4.85%
3 Years	4.83%
4 Years	4.82%
5 Years	4.88%

** Best fixed rate cash account for 2yrs, 3yrs, 4yrs & 5yrs available using Moneyfacts on 31 May 2026.

Investment Risk

Interest Rate Risk: Fluctuations in interest rates may affect the value of the portfolio and your investment. For example, if interest rates rise the price of the gilts may fall and vice versa.

Reinvestment risk: The risk that money earned from an investment can't be reinvested at a comparable rate to the current rate of return.

Annual Management Charge (AMC)	0.10%
Portfolio Yield to Maturity	3.65%

Cash	-	-	-	-	1.00%

Portfolio weightings, prices and Yield to Maturity as at 31 May 2026.

***Gross equivalent yield:** Also known as the tax-equivalent yield, is the yield a taxable investment would need to produce to match the after-tax yield of a comparable tax-exempt investment. In the context of the AJ Bell Gilt MPS, the figures illustrated represent the yield required from a cash deposit where returns are provided through income, taxable at an individuals' marginal rate of tax.

Yield to Maturity: (YTM) is the total return from a gilt issue if you hold it until maturity, represented on an annualised basis. For gilts with less than one year to maturity this assumes reinvestment can be made at a comparable rate. This is referred to as reinvestment risk. The YTM is therefore not a representation of the actual return you will receive. YTM assumes all coupon and principal payments are made in a timely manner. These issues are denoted with "+".

Tax: Tax benefits depend on your circumstances and tax rules may change.

! Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

Investment Risk

Interest Rate Risk: Fluctuations in interest rates may affect the value of the portfolio and your investment. For example, if interest rates rise the price of the gilts may fall and vice versa.

Reinvestment risk: The risk that money earned from an investment can't be reinvested at a comparable rate to the current rate of return.

AJ Bell Gilt MPS Final Maturity 2029

As at 31 May 2026

***Gross equivalent yield:** Also known as the tax-equivalent yield, is the yield a taxable investment would need to produce to match the after-tax yield of a comparable tax-exempt investment. In the context of the AJ Bell Gilt MPS, the figures illustrated represent the yield required from a cash deposit where returns are provided through income, taxable at an individuals' marginal rate of tax.

Yield to Maturity: (YTM) is the total return from a gilt issue if you hold it until maturity, represented on an annualised basis. For gilts with less than one year to maturity this assumes reinvestment can be made at a comparable rate. This is referred to as reinvestment risk. The YTM is therefore not a representation of the actual return you will receive. YTM assumes all coupon and principal payments are made in a timely manner. These issues are denoted with "+".

Tax: Tax benefits depend on your circumstances and tax rules may change.

! Past performance is not indicative of future performance. The value of investments may go down as well as up and the income generated by investments is not guaranteed and may fluctuate. You may receive back less than the amount that you invested.

AJ Bell Gilt MPS Final Maturity 2030

As at 31 May 2026

Investment objective

The AJ Bell Gilt Portfolio Service aims to invest in direct gilts which deliver a return to investors predominately via capital gains. Income returns will be minimised where possible, however, they will constitute part of the overall investment return.

The portfolios will have exposure to direct nominal gilts that mature within the next 4 years only, with no exposure to index-linked gilts, third-party products or to higher-risk assets such as shares.

The portfolios do not automatically rebalance, meaning cash can be extracted upon maturity of a gilt where appropriate.

Investment approach

The portfolio aims to deliver tax-efficient returns by investing directly in UK government bonds (gilts). It is structured to offer transparency, allowing investors to clearly understand the expected returns each year.

The investment strategy focuses on short-dated gilts with low coupon rates that are trading at a discount to par, with the objective of maximising tax-exempt capital gains upon maturity.

Gilts are selected using in-house research conducted by the AJ Bell Investments team, who continuously monitor the market to identify suitable opportunities that align with the portfolio's return objectives.

Benefits of Gilt MPS

- ✓ Tax efficient - gilts are free from capital gains tax, meaning you can keep more of your return when buying at a discount
- ✓ Stability & security - the UK government has never defaulted on a bond payment, meaning gilts held to maturity are a particularly low-risk way to achieve a stable return
- ✓ Low-cost - generate tax-efficient returns for market-leading management charge of 0.10%

Holding period	Best fixed rate cash account**

AJ Bell Gilt MPS Final Maturity 2031

As at 31 May 2026

Investment objective

The AJ Bell Gilt Portfolio Service aims to invest in direct gilts which deliver a return to investors predominately via capital gains. Income returns will be minimised where possible, however, they will constitute part of the overall investment return.

The portfolios will have exposure to direct nominal gilts that mature within the next 5 years only, with no exposure to index-linked gilts, third-party products or to higher-risk assets such as shares.

The portfolios do not automatically rebalance, meaning cash can be extracted upon maturity of a gilt where appropriate.

Investment approach

The portfolio aims to deliver tax-efficient returns by investing directly in UK government bonds (gilts). It is structured to offer transparency, allowing investors to clearly understand the expected returns each year.

The investment strategy focuses on short-dated gilts with low coupon rates that are trading at a discount to par, with the objective of maximising tax-exempt capital gains upon maturity.

Gilts are selected using in-house research conducted by the AJ Bell Investments team, who continuously monitor the market to identify suitable opportunities that align with the portfolio's return objectives.

Benefits of Gilt MPS

- ✓ Tax efficient - gilts are free from capital gains tax, meaning you can keep more of your return when buying at a discount
- ✓ Stability & security - the UK government has never defaulted on a bond payment, meaning gilts held to maturity are a particularly low-risk way to achieve a stable return
- ✓ Low-cost - generate tax-efficient returns for market-leading management charge of 0.10%
