

Risk profiling tools guide

As at 31 May 2026

Ever since the financial crisis of 2008/2009, the use of risk profiling tools has been on the rise within the advice community. Designed to assist with the Know Your Customer (KYC) requirements and investment suitability process, risk profiling tools seek to bring a more scientific approach to the subjective matter of assessing a client's:

- ability to take risk
- willingness to accept risk
- capacity for loss
- knowledge and experience

This information is then distilled into a risk rating for the client and adviser to discuss.

At AJ Bell, our purpose is to help people invest. To assist advisers and clients with the identification of appropriate investment solutions, we have adopted an outcome orientated approach to product design. This approach focuses on customer outcomes.

We are also committed to offering choice, so as well as providing a variety of products across the entire risk spectrum, we have partnered with a wide range of risk profiling tool providers.

As the market leader in this field, Distribution Technology has a long track record of using its Dynamic Planner risk questionnaire to help investors choose the right investment.

The AJ Bell Passive & Active MPS ranges and the CG AJ Bell Growth Funds are designed to deliberately aim for risk profiles identified by the Dynamic Planner system. This is known as 'risk targeting', and means that advisers adopting the Distribution Technology approach can be sure that the solution they choose aligns with their client's needs, providing a dovetailed approach to risk and return and making suitability seamless.

The AJ Bell Income range is designed to deliver a target annual income of 3.00% – 5.00%, when measured over a trailing 3 year period. They have been risk mapped by Dynamic Planner to help advisers select the right mandate for their client's needs.

However, this doesn't mean you have to use Dynamic Planner if you want to use our products and services. Thanks to our partnerships with the other major providers of risk profiling tools, including eValue, Finametrica and Synaptic, all of our portfolios can be mapped to the profiler of your choice.

* Provides the position of the expected volatility and associated risk level based on the latest available asset allocation (i.e. 31 March 2026)

Analysis

CG AJ Bell Passive Global Growth

The portfolio remains almost entirely invested in equities, with an allocation of approximately 98.8% as at March. Despite this, it continues to sit below its assigned Risk Profile 8, with the latest modelled risk level at 7.83 based on the Q2 2026 CMA.

This is primarily driven by changes in cross-market correlations between US equities and the rest of the world, which have reduced the portfolio's diversification benefit in recent years.

Active MPS 6 and **Passive MP6** are also borderline/ below profile due to the same reasoning as above.

Appendix

Status descriptions

A red status indicates that the solution's current risk profile is no longer appropriate to the DP scale and that it will be changed at next quarter's review unless action is taken by the asset management team.

An amber status indicates that one or more of the measures considered may indicate the possibility of an alternative risk profile. This could be due to short-term tactical positioning within the solution or other market considerations and does not imply that the long-term risk profile should necessarily change.

A green status indicates that the solution is in line with the assigned risk profile and no action is needed.

Basis of Preparation and Use

Analysis

Pactive MPS 6

The portfolio remains almost entirely invested in equities, with an equity allocation of approximately 93% as at March. Despite this, it continues to sit below its assigned Risk Profile 8, with the latest modelled risk level at 7.85 based on the Q2 2026 CMA.

This is primarily driven by changes in cross-market correlations, particularly between US equities and the rest of the world, which have reduced the portfolio’s diversification benefit in recent years.

1. INTRODUCTION

EValue Limited (“EV”) owns the Funds Risk Assessor solution, which can be used to measure the risk rating of an investment fund or portfolio of investment funds. AJ Bell wishes EV to supply data output from Funds Risk Assessor, classifying their manual funds and/or solutions against EV’s standard risk rating models, in order to understand how the investment funds and/or solutions that it makes available, are risk rated by Funds Risk Assessor.

2. GENERAL OVERVIEW

The funds or portfolios were added from the EV fund database as 6 separate portfolios in Funds Risk Assessor, as specified by AJ Bell.

2.1 Content

This report details the data output from Funds Risk Assessor, rating AJ Bell's chosen funds against the EV Standard 1-5, 1-7 and 1-10 risk rating scales; and across differing terms of 5, 10, 15, 20 and 25 years.

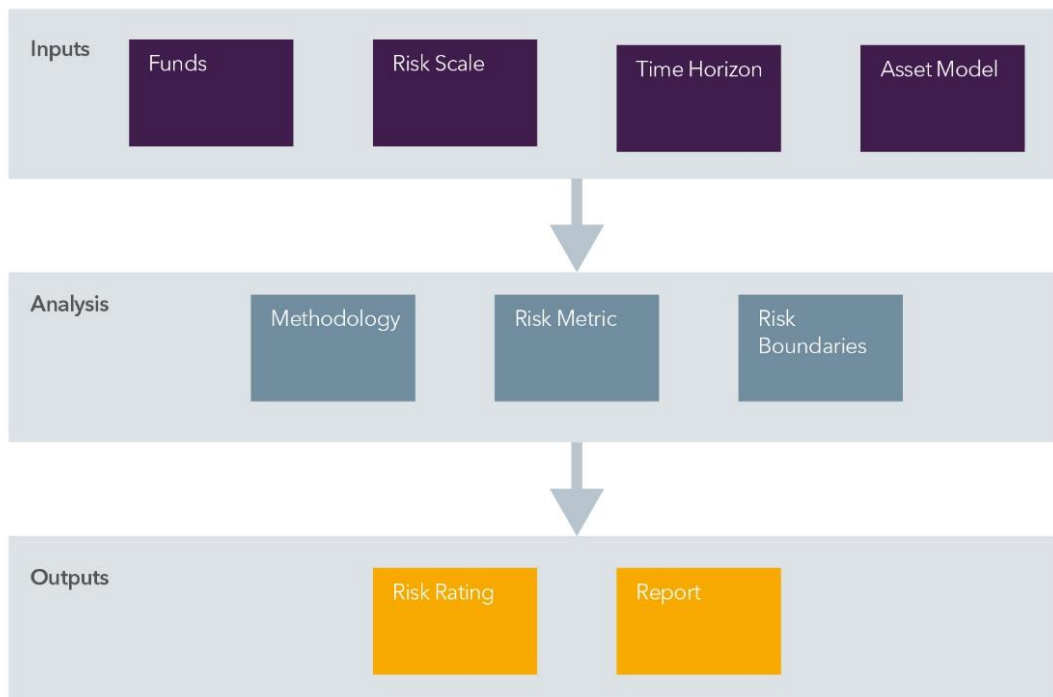

3. HOW DO WE RISK RATE YOUR FUND OR PORTFOLIO?

3.1 Risk Rating Process

Funds Risk Assessor can risk rate any investment proposition whether an individual discretionary fund, a model portfolio or any other central investment proposition. It does this by applying a consistent and robust approach to determining the risk of the fund compared to the asset allocation benchmarks from any standard risk profiling questionnaire or process.

It is important to assess the risk of funds and portfolios prospectively because volatility measures from the recent past are not a reliable guide to the future (for example, low volatility in UK equity returns in the years running up to the COVID-19 pandemic was followed by high volatility during the pandemic). To measure risk prospectively, a very wide range of potential economic scenarios generated by a stochastic asset model are used to measure volatility over selected durations.

The risk rating process can be summarised as follows:

3.2 Inputs

Funds

The funds to be included in the assessment will be added from the FE fund feed in the Funds Risk Assessor tool, as specified by AJ Bell.

Additional funds which do not appear in publicly available information, such as in-house managed funds, can be added to the assessment by specifying the assumed asset allocation of these funds.

The asset allocation of the funds is used to assess objectively the degree of investment market risk to which the fund is currently exposed. There are no subjective judgements made about the investment manager's ability to add future value (for example, high returns for a lower level of risk).

Risk scale

To calculate a risk rating, a scale to compare the risk against must be set.

Funds Risk Assessor uses target asset allocations supplied with a risk questionnaire to determine the position on the risk scale against which the funds selected can be assessed using their underlying asset split.

The system has the following pre-set asset allocation targets that can be used:

1. EV Standard 5
2. EV Standard 7
3. EV Standard 10

Although it is possible to set up other benchmark asset allocations, we have used the EV Standards as agreed.

Time horizon

Different asset classes display different relative risk over different time horizons. The risk assessment of funds depends upon the time horizon considered for the investment. For the purpose of this report, we have used the time horizons of 5, 10, 15, 20 and 25 years.

Asset model

To assess the risk of the fund, the potential performance and its future variability are projected using stochastic forecasts generated from the EV asset model, which underlies the Funds Risk Assessor tool.

3.3 Analysis

Methodology

The risk measure of the selected target asset allocation is calculated. These risk measures are then used as the benchmark for assessing the portfolio or fund. For example, a portfolio or fund with the same risk measure as the risk category 6 benchmark would be rated 6, whilst one with a risk measure mid-way between the risk category 6 and 7 benchmarks would be given a risk rating of 6.5.

3.4 Outputs

Risk rating

For the risk assessment, Funds Risk Assessor will calculate a decimal risk score as described above.

The decimal risk score is shown on a pictorial scale as follows:

Risk scores are calculated as a decimal but rounded to the nearest whole number risk category, so that decimal risk scores between 5.50 and 6.49 will be rated as risk category 6.

If the arrow in the diagram is directly under the risk rating number, the portfolio's volatility exactly matches the target risk. The example above shows how a decimal risk rating score of 6.3 out of 10 is shown.

4. RESULTS

4.1 General

The tables on the following pages illustrate the risk meter displays for the risk rating exercise. We have modelled at the highest term for each term range requested i.e. 5, 10, 15, 20 and 25 years.

Disclaimer

This report is prepared with due care and skill for AJ Bell (“Client”) by EV Risk Limited (“EV”) using approved market data feeds or fund asset allocations as provided by Client. EV determines a fund’s risk rating by projecting future outcomes using simulations generated by its proprietary asset model and based on the fund’s high-level asset allocation. For growth risk ratings, these projections are forward-looking over a range of durations from 5 to 25 years, and the risk of the fund is determined by comparison to a set of risk benchmarks. For income risk ratings, the measure is Income at Risk, defined as the potential downside of sustainable income over a 3-year period. EV’s methodology focuses only on the range of potential outcomes at different durations and does not incorporate all risks to which a fund may be subject, including but not limited to credit risk, liquidity risk, concentration risk within asset classes, manager business risk, political risk, and other specific risks associated with the way the fund is managed. Customers and third parties using EV’s risk ratings should ensure that the limitations of these ratings are understood by their clients. EV does not endorse or recommend any investment solution to Client or to third parties. EV shall use reasonable skill and care to ensure that any report is reasonably accurate but will not be held liable for any loss or damage suffered by any third party as a result of reliance on any report supplied.

FinaMetrica Risk Tolerance Score Mappings

FinaMetrica provides advisers with the tools and procedures that lead to their clients' properly informed commitment. This mappings guide helps facilitate the investment strategy selection process for **AJ Bell MPS portfolios and CG AJ Bell passive funds** by matching clients' risk tolerance score to a fund. This enables an apples-to-apples comparison between risk tolerance and investment risk.

The following is a summary of the FinaMetrica three factor risk profiling methodology as recommended for use by advisers. It's been designed to be of assistance to fund manager's field staff. A more detailed explanation can be found at http://www.riskprofiling.com/Downloads/QuickStart_Guide.pdf

➤ Step One

Once the client has completed the FinaMetrica risk test the adviser reviews the report with their client. The client confirms they are comfortable that the score reasonably represents their risk tolerance.

➤ Step Two

The adviser maps the clients' risk tolerance score to a specific fund in the portfolio suite shown below. This is an indication of how likely the fund will deliver returns and volatilities that meet the client's emotional preferences.

FinaMetrica Risk Tolerance Score Mappings for **AJ Bell MPS portfolios and CG AJ Bell passive funds**.

For v3.0 and s3.0 risk tolerance profiles.

- ❖ The Best Fit ranges divide the FinaMetrica 0 to 100 risk tolerance scoring scale across the funds, showing, for this set of funds, which is most appropriate for a particular risk tolerance score, and
- ❖ The Too Much/Marginal/OK/Marginal/Too Little score ranges provide score ranges for each of the funds considered in isolation and are the primary guide to whether a particular fund is suitable from a risk tolerance perspective.

➤ Step Three

The adviser can then test the extent to which that fund is likely to meet their client's needs as they fall due within their capacity for loss.

➤ Step Four

It's possible that the fund that mapped to risk tolerance may not meet the client's financial needs or loss capacity. In that case the client will likely need to make some trade-offs in collaboration with the adviser. It may lead to adjustments to the client's financial plan that includes goal and behavioural changes or the selection of a fund that's less consistent with their risk tolerance.

➤ Step Five

The adviser should keep clear records of the discussion and reasons for the fund selection.

➤ Step Six

On a regular basis the adviser should review how well the fund continues to map to the client's risk tolerance, financial needs and loss capacity.

For more information, including the methodology upon which the table is based, advisors should refer to the Asset Allocation Mappings calculator and its guide, which can be found under System Resources at www.finametrika.com and also at www.riskprofiling.com.

© Morningstar, Inc. Risk tolerance scores were mapped to the funds' strategic asset allocations as at 30/04/2026. The mappings are only for use by financial advisors licensed to use FinaMetrica, are for guidance purposes only and do not constitute financial or investment advice. Financial advisers must satisfy themselves that the funds' current asset allocations reflect the risk/return expectations of the funds when mapped. AJ Bell does pay Morningstar for the mappings in the table however these mappings are calculated independently by Morningstar.

CLIENTS FOR LIFE

Synaptic Risk Rating Service

Fact
Sheet

Q2 2026

Using the Risk Rating Service

It is the responsibility of the adviser to ensure that the level of risk that their client is exposed to is appropriate for their circumstances. The online Synaptic Attitude to Risk Questionnaire can assist in performing and saving a client risk appraisal, and the Risk analysis provided in these Fact Sheets can assist in identifying a suitable investment:

- Establish with the client how much they can afford to lose (tolerance for loss)
- Establish with the client how much they are prepared to lose in relation to the investment objective under consideration
- Use the Synaptic Risk Rating Service, or Synaptic Modeller tool to establish the 'minimum gain', or 'Capacity for Loss' quotient
- Compare the numbers to see if there is alignment. Due to the subjective nature of risk, there is a reliance on the skill and experience of the adviser to ensure that 'informed consent' has been achieved, on the basis that the client understands and agrees to the risk proposition.

The Capacity for Loss Quotient

The Synaptic Risk Rating Service is derived from the risk framework provided by Moody's Analytic's Stochastic engine. It has been created to provide advisers with more robust, quantitative measures for risk than is generally available, and provide the opportunity for them to move away from Volatility based ratings. Projections are asset allocation of the underlying investments. The multiple scenarios modelled by the stochastic engine aim to capture the likelihood of a range of investment outcomes:

- The Minimum gain figure represents the possible loss to be sustained 5% (or 1 in 20 year event), in any one year. I.E. 'dear client, you have a 1 in 20 chance of losing 20% of your portfolio in any one year, in search of the higher returns you seek'.
- The Maximum gain figure represents the 5% of best possible outcomes returned by the model, and the Mean is the average annual growth calculated by the model.

Graph showing spread of risk using Minimum, Mean and Maximum gain figures derived from the Moody's Analytic's stochastic outputs, as applied to the Strategic asset allocation

Synaptic Risk Rating Service

Fact
Sheet

Q2 2026

Using the Risk Rating Service

It is the responsibility of the adviser to ensure that the level of risk that their client is exposed to is appropriate for their circumstances. The online Synaptic Attitude to Risk Questionnaire can assist in performing and saving a client risk appraisal, and the Risk analysis provided in these Fact Sheets can assist in identifying a suitable investment:

- Establish with the client how much they can afford to lose (tolerance for loss)
- Establish with the client how much they are prepared to lose in relation to the investment objective under consideration
- Use the Synaptic Risk Rating Service, or Synaptic Modeller tool to establish the 'minimum gain', or 'Capacity for Loss' quotient
- Compare the numbers to see if there is alignment. Due to the subjective nature of risk, there is a reliance on the skill and experience of the adviser to ensure that 'informed consent' has been achieved, on the basis that the client understands and agrees to the risk proposition.

The Capacity for Loss Quotient

The Synaptic Risk Rating Service is derived from the risk framework provided by Moody's Analytic's Stochastic engine. It has been created to provide advisers with more robust, quantitative measures for risk than is generally available, and provide the opportunity for them to move away from Volatility based ratings. Projections are asset allocation of the underlying investments. The multiple scenarios modelled by the stochastic engine aim to capture the likelihood of a range of investment outcomes:

- The Minimum gain figure represents the possible loss to be sustained 5% (or 1 in 20 year event), in any one year. I.E. 'dear client, you have a 1 in 20 chance of losing 20% of your portfolio in any one year, in search of the higher returns you seek'.
- The Maximum gain figure represents the 5% of best possible outcomes returned by the model, and the Mean is the average annual growth calculated by the model.

Graph showing spread of risk using Minimum, Mean and Maximum gain figures derived from the Moody's Analytic's stochastic outputs, as applied to the Strategic asset allocation

Accumulation Risk Ratings

Summary

We conclude the following Risk Ratings for the AJ Bell Growth Funds:

CG AJ Bell Cautious Fund	3
CG AJ Bell Moderately Cautious Fund	4
CG AJ Bell Balanced Fund	5
CG AJ Bell Moderately Adventurous Fund	7
CG AJ Bell Adventurous Fund	8
CG AJ Bell Global Growth Fund	9

Assessment

The Defaqto methodology involves using both quantitative and qualitative inputs to risk rate a fund:

Input 1 - Forecast the fund's future volatility

Input 2 - Discussion with the fund manager

Since our profiles are overlapping and not contiguous, we have some discretion as to whether a fund is rated in the upper or the lower profile.

Our assessment has been considered by our Investment Committee, and has taken into account some of AJ Bell's suggestions when arriving at our Risk Ratings.

Investment Committee summary

Stochastic (future) volatility

Our analysis has been based on holdings data provided by AJ Bell.

CG AJ Bell Cautious Fund

Risk Rated on 11 May 2026

Mandate

The fund aims to achieve long-term capital growth with a high level of exposure (often indirect) to defensive assets such as cash, fixed interest securities, money market funds and collective investment schemes following alternative strategies such as property and commodities and a low level of exposure to higher risk assets such as equities.

Investment Committee Notes

We used fund holdings supplied by AJ Bell to calculate all stochastic measures. Through discussion with AJ Bell in which the Defaqto methodology and their approach were considered, both Defaqto and AJ Bell believe that this fund is most appropriately risk rated as a 3.

Accumulation Risk Ratings

Summary

We conclude the following Risk Ratings for the AJ Bell Active MPS (Platform and Direct):

AJ Bell Active MPS 1	3
AJ Bell Active MPS 2	4
AJ Bell Active MPS 3	5
AJ Bell Active MPS 4	7
AJ Bell Active MPS 5	8
AJ Bell Active MPS 6	9

Assessment

The Defaqto methodology involves using both quantitative and qualitative inputs to risk rate a portfolio:

Input 1 - Forecast the portfolio's future volatility

Input 2 - Discussion with the portfolio manager

Since our profiles are overlapping and not contiguous, we have some discretion as to whether a portfolio is rated in the upper or the lower profile.

Our assessment has been considered by our Investment Committee, and has taken into account some of AJ Bell's suggestions when arriving at our Risk Ratings.

Investment Committee summary

Stochastic (future) volatility

Our analysis has been based on holdings data provided by AJ Bell.

AJ Bell Active MPS 1

Risk Rated on 11 May 2026

Mandate

AJ Bell Active MPS 1 aims to minimise the risk of capital loss and is designed for investors with lower confidence in financial markets. As such it has a small exposure to higher risk equity assets, and majority holdings in cash, bonds and lower-volatility assets. There is some risk of this portfolio's value being eroded by inflation. Active funds are used where appropriate with the aim of improving return after fees compared to a passive implementation.

Investment Committee Notes

We used portfolio holdings supplied by AJ Bell to calculate all stochastic measures. Through discussion with AJ Bell in which the Defaqto methodology and their approach were considered, both Defaqto and AJ Bell believe that this portfolio is most appropriately risk rated as a 3.

AJ Bell Active MPS 2

Risk Rated on 11 May 2026

Mandate

AJ Bell Active MPS 2 aims to protect capital against the effects of inflation, and is designed for investors who can tolerate some capital loss as markets fluctuate. It holds a broad range of assets, including equities, with significant allocations to bonds and lower volatility assets. Active funds are used where appropriate with the aim of improving the return after fees compared to a passive implementation.

Investment Committee Notes

We used portfolio holdings supplied by AJ Bell to calculate all stochastic measures. Through discussion with AJ Bell in which the Defaqto methodology and their approach were considered, both Defaqto and AJ Bell believe that this portfolio is most appropriately risk rated as a 4.

AJ Bell Active MPS 3

Risk Rated on 11 May 2026

Mandate

AJ Bell Active MPS 3 aims to grow the value of assets in excess of inflation, and is suitable for investors who can accept larger short-term dips in portfolio value in order to achieve higher potential returns. It holds a broad range of assets, with greater weighting to equities and smaller holdings in lower-volatility assets. Active funds are used where appropriate with the aim of improving the return after fees compared to a passive implementation.

Investment Committee Notes

We used portfolio holdings supplied by AJ Bell to calculate all stochastic measures. Through discussion with AJ Bell in which the Defaqto methodology and their approach were considered, both Defaqto and AJ Bell believe that this portfolio is most appropriately risk rated as a 5.

AJ Bell Active MPS 4

Risk Rated on 11 May 2026

Mandate

AJ Bell Active MPS 4 aims to grow the value of assets in excess of inflation in the longer term and is designed for investors who understand risk and how this can be mitigated with long-term planning. It has a high proportion of equity holdings, with limited exposure to cash, bonds and other defensive assets.

Investment Committee Notes

We used portfolio holdings supplied by AJ Bell to calculate all stochastic measures. Through discussion with AJ Bell in which the Defaqto methodology and their approach were considered, both Defaqto and AJ Bell believe that this portfolio is most appropriately risk rated as a 7.

AJ Bell Active MPS 5

Risk Rated on 11 May 2026

Mandate

AJ Bell Active MPS 5 aims to grow the value of assets in excess of inflation in the longer term, for investors who understand the risk and reward relationship of pure equity portfolios. The focus is on global equity markets, with minimal holdings in cash, fixed interest and other defensive assets. Active funds are used where appropriate with the aim of improving the return after fees compared to a passive implementation.

Investment Committee Notes

We used portfolio holdings supplied by AJ Bell to calculate all stochastic measures. Through discussion with AJ Bell in which the Defaqto methodology and their approach were considered, both Defaqto and AJ Bell believe that this portfolio is most appropriately risk rated as an 8.

AJ Bell Active MPS 6

Risk Rated on 11 May 2026

Mandate

AJ Bell Active MPS 6 aims to grow the value of assets in excess of inflation in the longer term, and is designed for investors who understand the risk and reward relationship of pure equity portfolios. The focus is on global equity and higher risk equities, such as emerging markets, small cap and technology. There are minimal holdings in cash, fixed interest and other defensive assets.

Investment Committee Notes

We used portfolio holdings supplied by AJ Bell to calculate all stochastic measures. Through discussion with AJ Bell in which the Defaqto methodology and their approach were considered, both Defaqto and AJ Bell believe that this portfolio is most appropriately risk rated as a 9.

Investment Committee summary

Stochastic (future) volatility

Our analysis has been based on holdings data provided by AJ Bell.

AJ Bell Pactive MPS 1

Risk Rated on 11 May 2026

Mandate

AJ Bell Pactive MPS 1 aims to make a positive return when measured over a period of at least five years, this may be less than the level of inflation (as measured by the consumer price index). Over shorter periods the portfolio may lose value as it invests in securities that can go both up and down in price.

Investment Committee Notes

We used portfolio holdings supplied by AJ Bell to calculate all stochastic measures. Through discussion with AJ Bell in which the Defaqto methodology and their approach were considered, both Defaqto and AJ Bell believe that this portfolio is most appropriately risk rated as a 3.

Global Growth	15.7%	5	4.7	6	6.3

About these risk ratings

We report above the risk bands for each investment, including unrounded numbers (for example, 3.6 gets rounded up to 4).

These unrounded numbers should be treated with caution, to avoid leaning too heavily on spuriously precise estimates – however, they can be useful to see *roughly* where each investment sits within each risk band.

Selecting investments

We highlighted investments close to category boundaries. You can justifiably recommend them to investors on either side of the boundary.

This is particularly the case for:

- a risk band that has few or no alternative portfolios;
- portfolios that are on the verge of being too high risk for the band they are in;
- higher risk bands, where precise placement is more difficult.

It is typical for some bands to contain multiple portfolios. If this is the case, the adviser has flexibility to choose whichever is more appealing based on other relevant characteristics.

What to do if a risk band is empty

In some cases, there may not be a portfolio available in a particular category:

- If this is the case for the lowest risk band, the investor should hold one of the least risky investments and ensure that they also hold a portion of cash to bring their overall risk down sufficiently.
- If this happens for the highest risk band, the investor should opt for one of the riskier investments and consider a small portion in opportunistic assets.

Mapping investors to investments: our methodology in brief

What do we mean by risk?

A good risk measure is meaningful, and relevant to investors' goals. We believe it should be:

- Forward-looking
- Long-term
- Focused on outcomes (i.e. the destination, not the journey)

Historical volatility may be ubiquitous in the investments industry, but it's hardly relevant to most people. Worse, short-term volatility is unstable, so that the same portfolio ends up with a different risk rating over time, sometimes within months.

We therefore define investment risk as the **standard deviation of projected long-term returns**. By "long-term" we mean 10 years, and we present the figure annualised.

How much risk is suitable?

The starting point for any mapping is an individual's **Suitable Risk Level**. The foundation for this is their **Risk Tolerance**: their long-term willingness to take risk with their total net wealth.

Since investors usually have other assets besides their portfolio (as well as liabilities, and human capital), their Risk Tolerance needs to be adjusted to account for their **Risk Capacity** (their financial ability to take risk).

Investors must also be mindful of their **Emotional Capacity** to take risk (that is, their composure), as well as their investing **Knowledge & Experience**.

For a full discussion of the Oxford Risk suitability methodology, and how we bring these elements together in a single Suitable Risk Level, please contact us.

Quantifying Suitable Risk Levels

The Suitable Risk Level puts each investor on a scale relative to the general population. We must then translate these *qualitative* descriptions into *quantitative* risk ranges, and from there identify suitable investments.

To do this, consider the full range of possible risk levels on a scale of 0 to 1 (from no risk tolerance at all, to being completely indifferent to risk). We assume that this theoretical upper limit could only be reached if someone had both exceptionally high Risk Tolerance and Risk Capacity.

We also think it reasonable that if an investor had either neutral Risk Capacity or medium Risk Tolerance, they would lie in the middle of this spectrum: 0.5.

We further assume that:

- Investors choose an optimal portfolio, according to a power utility function
- Multi-asset portfolio returns are lognormal
- The long-term Sharpe ratio is 0.4

We believe these assumptions make sense in the context of establishing broad risk bands to encompass sections of the population. Importantly, they allow us to traverse the gap from qualitative risk categories to quantitative limits in a rigorous way, without making reference to any pre-existing portfolios.

This leads us to the following (rounded) boundaries between risk bands:

Risk bands for five categories

Risk band	Lower limit (%)	Mid-point (%)	Upper limit (%)
Low		3.3	5.0
Medium-Low	5.0	6.7	8.3
Medium	8.3	10.0	11.7
Medium-High	11.7	13.3	15.0
High	15.0	16.7	

Risk bands for seven categories

Risk band	Lower limit (%)	Mid-point (%)	Upper limit (%)
Very Low		2.50	3.75

Low	3.75	5.00	6.25
Medium-Low	6.25	7.50	8.75
Medium	8.75	10.00	11.25
Medium-High	11.25	12.50	13.75
High	13.75	15.00	16.25
Very High	16.25	17.50	

Measuring the risk of investments

We define risk in terms of projected long-term returns, but in making those projections we cannot simply copy and paste the past. Recent history offers a guide to the future in some respects, yet we have only a very limited supply of realised long-term outcomes – inadequate to fully sketch out their shape.

Instead, we simulate myriads of possible futures. This can be done by first describing an investment portfolio in terms of its allocation to broad asset classes, each represented by generic, diversified market indices.

Then, we generate a great many return paths for these asset classes, by remixing historical index data in such a way as to preserve important features such as cross-correlations and momentum.

As for multi-asset portfolios, we assume quarterly rebalancing.

Finally, we calculate the annualised standard deviation of these ex ante 10-year returns, our measure of portfolio risk.

This guide provides general information about the AJ Bell Funds and Managed Portfolio Service. It should not be read or construed as investment advice. It is your responsibility to assess your client's circumstances and make a personal recommendation that is suitable for their needs.
